

Reports from the 2005 Centennial Conference of the Hawaiian Entomological Society

The following pages in this volume of the *Proceedings of the Hawaiian Entomological Society* (2007: 39) are dedicated to a series of short reports or summaries of papers that were presented at the 2005 meeting of the Hawaiian Entomological Society (Pacific Entomology Conference), held in Waikiki, Hawaii. This meeting coincided with the centennial of the Hawaiian Entomological Society and offered an opportunity to present perspectives on the past 100 years of entomological science in Hawaii. These short papers are intended to give a brief overview of the current state of research on invasive insect species management in Hawaii, tephritid fruit fly impacts and management in Hawaii, and termite research in Hawaii. Authors had the option to provide a very brief overview summary of their work and the current state of their research area, or to provide a more comprehensive report of current work with new data.
